

AUTOMATED LOADER ARM

ABSTRACT OF THE DISCLOSURE

A container handling system is disclosed, including
subsystems for accessing, grabbing, lifting and tipping
5 collection containers into the charging compartment of a
collection vehicle, or the like, and thereafter returning
emptied containers to their pick up locations. The
invention includes an automated, short radius pivot arm
capable of operation in close quarters which may further
10 be mounted to and operated by means of a hydraulic rotary
actuator. Electronic control is also provided.
